Executive Summary & Problem Framing

Situation

Alfina Lofaro Kinesiology and Coaching is a Brisbane sole trader practice built on the founder's personal brand, drawing on 20 years as an educator and 25 years as a coach. The business is shifting from one-to-one delivery to a more scalable model. The product ladder includes a free relationship quiz, a low-cost mini-course, the book ***Love Deliberately***, a self-paced online course, and an in-person retreat. The method is differentiated by one framework applied across romantic, family, friendship, and workplace relationships, with professional Kinesiology used to reach the unconscious patterns that conversation alone does not.

Complication

The pathway that can fill the ladder does not exist. Clients arrive mainly through referral; this route generates one-to-one bookings rather than digital product sales. Social media can attract an audience, but this attention stops before the course. The founder is explicit that social media is a medium rather than a destination, and not somewhere she wants to invest much time. What she wants from social media is people completing the quiz and buying the course. There are three factors constraining the solution boundary. The founder is a single operator working alongside full-time employment. The advertising spending is limited until the popularity improves. There is no established following to draw on, and this is the first product brought to market under her own name.

Question

How does the business convert social media attention into quiz completions and course purchases, using organic, low-cost methods a single operator can sustain?

Scope

The core audience of the founder is Australian women aged 40 and over. The founder is willing to extend her field to young couples who are going to be married without affecting the core audience, which we will treat as a possible extension rather than a parallel track. We can exclude approaches that the brief rules out: romantic-only positioning, high ad spend, high-production content, and strategies that depend on an existing following.

Market and Industry Analysis

2. Market and Industry Analysis

Industry Overview

The market for personal development and coaching services is experiencing tremendous growth, with global coaching industry revenue reaching $5.34 billion with an increase of over 60% compared to 2019. In Australia, the coaching industry is currently valued at AUD 843.1 million and is projected to continue expanding strongly (Yam, 2026). The primary driver of this growth is the strain on the clinical healthcare system. According to the latest data from the Australian Institute of Health and Welfare (2025), 2.8 million Australians accessed mental health services through Medicare during the 2024 to 2025 period. 43.9% of Australians aged 16–85 have experienced mental disorders at some point in their lives (ABS, 2023). The high cost and long wait times associated with traditional psychological services have driven Australian consumers to turn to non-clinical coaching and preventative mental health support (National Mental Health Commission, 2025).

In this market landscape, Alfina Lofaro Kinesiology and Coaching's shift from a one-on-one consulting model to a one-to-many approach represents a highly astute strategic move. Digitizing products not only enables the business to overcome the time constraints inherent to a sole proprietorship but also expands its reach to a audience eager for flexible personal development solutions.

Macroeconomic Analysis (PESTEL)

Political: The Australian government's support policies for small businesses create a favorable regulatory environment (ASBFEO, 2025). Businesses in Brisbane can leverage this advantage to develop and digitize their service models.

Economic: Amid rising cost-of-living pressures (RBA, 2026), a product funnel structure, ranging from free quizzes and low-entry-cost courses to premium retreats helps eliminate initial financial barriers for customers. Prioritizing organic growth over heavy advertising expenditure also helps optimize cash flow.

Social: The core customer base consists of Australian women over 40 facing relationship impasses, a demographic subject to significant invisible pressure (ABS, 2025) that requires deep subconscious intervention (Kinesiology). Young people preparing for marriage are also being considered as an opportunity for market expansion.

Technology: Technology serves as a vital lever enabling a sole trader to overcome time constraints. The core strategy involves multi-platform content repurposing to deliver self-paced courses without the need for expensive video production equipment.

Legal: The process of collecting customer emails via free resources requires businesses to strictly adhere to personal data protection principles under the Australian Privacy Act (OAIC, 2026).

Environmental: The shift toward one-to-many digital products fosters a more sustainable business model. According to a report by the Agency for Clinical Innovation (ACI, 2025), transitioning one-on-one psychological care services to an online format reduces carbon emissions per client by up to 50% by eliminating the need for physical travel, aligning perfectly with the brand's digitalization strategy.

Competitor Analysis

Competitor Analysis

The competitive landscape identified in the client brief includes three Australian competitors, Debbie Rivers, Samantha Jayne and Jacqueline Hellyer, and four global competitors with significant Australian audiences, including The Gottman Institute, Alison Armstrong, Jay Shetty and Quinlan Walther.

Among these, **Samantha Jayne** provides a relevant benchmark for personal-brand marketing. She positions herself as a dating expert using science, psychology and human behaviour, and her website reports more than 12,000 clients coached and over 15 years of experience (Samantha Jayne, n.d.-a). Her website also combines educational messaging with clear conversion mechanisms, including a free strategy call, women's and men's coaching, and dating-profile services (Samantha Jayne, n.d.-a). This demonstrates the value of clear niche positioning and strong calls-to-action. However, her positioning remains primarily focused on dating and finding romantic partners, whereas Love Deliberately addresses romantic, family, friendship and workplace relationships.

Jacqueline Hellyer and the LoveLife Clinic provide a closer benchmark for a practitioner-led, multi-product model. Hellyer has more than 20 years of clinical experience and operates across relationship counselling, online courses, podcasts, writing and retreats (LoveLife Clinic, n.d.-a). Her Couples Intimacy Masterclass further demonstrates how expertise can be converted into a self-paced digital product, while her retreats provide a higher-touch service offering (LoveLife Clinic, n.d.-b, n.d.-c). However, the LoveLife Clinic focuses strongly on sex, intimacy and romantic relationships, creating potential differentiation for Love Deliberately's broader relationship framework.

The Gottman Institute demonstrates how educational content can be used to build authority and engagement around relationship issues. Its online content addresses specific relationship problems and provides practical guidance, such as advice on establishing healthy digital boundaries within couples (The Gottman Institute, 2020). This educational approach provides a useful benchmark for Love Deliberately's content strategy.

SWOT: Love Deliberately's key **strengths** are its distinctive Professional Kinesiology methodology, broader relationship scope and developing product funnel. Its **weaknesses** include limited brand awareness, social proof and founder capacity. **Opportunities** include building an organic community among Australian women aged 40+, using educational content and free resources to generate email leads, and developing complementary wellness partnerships. **Threats** include established competitors with stronger authority, audiences and content ecosystems.

Customer Analysis

Customer Analysis

The brief identifies two customer groups at different stages. The established audience is women aged 40 and over who feel stuck in recurring patterns across intimate, family, friendship and work relationships. A second audience, younger people preparing for marriage, is being considered for a separate course. Demand for that course has not yet been tested. The two groups need different messages and should be assessed separately.

For the primary group, consider “Michelle”, a 49-year-old professional who often gives in to avoid conflict with her partner, family and colleagues. She is an illustrative persona based on the brief, not an interviewed client. Another conversation that leaves her feeling unheard might prompt her to look for help. A Facebook or Instagram post describing that pattern could lead her to Alfina’s profile. ACMA found that Facebook reached 78% of Australian adults over six months in 2025. Weekly Instagram use reached 44% of people aged 45–54 and 33% of those aged 55–64. These figures support testing both channels, but they do not measure conversion among women over 40 (ACMA, 2026).

Michelle then needs to decide whether Alfina’s approach fits her situation and whether she can commit the time and money. The profile and landing page should explain the seven-ingredient framework, what Professional Kinesiology involves and what each product offers. The free quiz gives her a first step, followed by optional emails, the mini course or the book. In Relationships Australia’s 2024 survey, 48% of respondents handled relationship pressures on their own and 13% sought professional help. A gradual journey is worth testing rather than assuming that a new visitor is ready to book coaching (Relationships Australia, 2024).

The proposed premarital audience has a different starting point. A younger woman or her partner may want to build communication and conflict skills before marriage. One could find a short exercise, share it with the other and then consider a self-paced course with live Q&A. This journey remains a hypothesis. The Australian Institute of Family Studies reports mixed evidence on the effects of premarital education on relationship quality (AIFS, 2016). A survey, waitlist or small pilot could test interest in this particular offer before the business invests in a second course.

Health and wellness businesses are a further opportunity, but the brief describes them as potential referral or cross-promotion partners. Their value depends on whether they serve the same women and can introduce Alfina’s work in a credible way.

Business Opportunities & Ideation

5. Business Opportunities & Ideation

Building on the preceding analysis, three business opportunities could help Alfina Lofaro Kinesiology and Coaching expand customer acquisition while remaining realistic for a sole operator with limited time and budget. These include strengthening word-of-mouth referrals for digital products, developing a reusable content system, and establishing complementary business partnerships.

5.1 Convert Word-of-Mouth into Digital Product Referrals

Alfina already receives customers through referrals; however, this pathway currently contributes mainly to one-to-one bookings rather than digital product sales. This creates an opportunity to extend an existing customer acquisition channel towards Alfina's scalable digital products.

Existing clients could voluntarily share the free relationship quiz with friends, family or colleagues through a simple referral link or QR code. This approach is supported by electronic word-of-mouth (eWOM) research, which suggests that word-of-mouth information can influence consumer trust and purchase intention (See-To & Ho, 2014). Rather than immediately asking a referred customer to purchase a course, the quiz provides a low-commitment introduction to Alfina's approach. With permission, authentic client testimonials could also help strengthen trust and social proof.

5.2 Develop a Reusable Content System

A second opportunity is to reduce the time required to maintain Alfina's digital presence. Rather than producing completely different content for each platform, one core relationship topic could be adapted into multiple formats, such as an Instagram carousel, Facebook post, short video and email.

This approach could help Alfina maintain consistent communication while reducing the pressure to continuously develop new content. Australian Government guidance recommends considering available time and resources when selecting social media platforms and suggests that effectively managing one or two relevant channels may be preferable to maintaining many channels poorly (Australian Government, n.d.).

5.3 Develop Complementary Partnership Channels

A third opportunity is to reach potential customers through complementary health and wellness businesses rather than relying entirely on Alfina's own audience. This opportunity can be understood through the Resource-Based View (RBV), which suggests that strategic alliances can create value by combining complementary resources between organisations (Das & Teng, 2000).

For Alfina, potential partners may provide access to established customer communities, while Alfina contributes her relationship education and Professional Kinesiology expertise. Potential collaborations could include newsletter features, joint educational content, workshops, guest appearances or referral links. This provides a relatively low-cost opportunity to reach more women aged 40+ without requiring Alfina to first establish a large social media following.

Further Evaluation

These opportunities represent initial strategic directions rather than final recommendations. Further research will evaluate each opportunity according to cost, time requirements, customer reach, conversion potential and feasibility for a sole operator. The proposed pre-marriage market can also be considered as a longer-term opportunity once customer demand has been validated.

Key Findings, Gap Analysis & Project Management

6. Key Findings, Gap Analysis & Project Management

6.1 Key Findings

The key conclusion is that the key limiting factor of the growth of Alfina is not the unavailability of either products or market opportunity avenue but the unavailability of a consistent channel of conversion between attention and action. It is already offered an upscaling product ladder and gets referrals, but lacks the consistency of transitioning potential customers through these channels to quiz-taking, email sign-up and course-buying. Thus, the initial focus must be on developing and trying a basic, inexpensive conversion system that can be maintained given the time and resource constraints of the founders. This discovery contributes to the grounds of considering the suggested referral, content-reuse and partner possibilities.

6.2 Gap Analysis

There are a number of evidence gaps. First, the business lacks the necessary amount of data at present as to which content themes or channels can be used to provide the highest quiz-to-course conversion. Second, course-specific, and social proofs are still evolving. Third, the business potential of health and wellness alliances has not been experimented. Lastly, the need of the proposed course on pre-marital relations is still doubtful and cannot be projected based on the current 40+ population. Such gaps imply that the basic validation of the expansion decisions is done contrary to instant investment.

6.3 Project Management Roadmap

It is suggested that a test-and-learn approach should be implemented in stages. Phase 1 must provide baseline quiz completion, email sign-up and course conversion goals. One reusable content workflow, one referral mechanism and few partnership activities should be piloted in Phase 2. Phase 3 would be looked at on the analysis of performance on the basis of conversion, customer reach, cost and founder time. Phase 4 must optimize and expand only the best performing activities, and pre-marital offer would be a longer-term opportunity until the demand will be confirmed.
