1. Executive Summary & Problem Framing

Alfina Lofaro Kinesiology and Coaching does not have an attention problem; it has a capture problem.

The business is a Brisbane sole trader practice built on the founder's personal brand, drawing on 20 years as an educator and 25 as a coach. The business is shifting from one-to-one delivery to a scalable model with a ladder running from a free relationship quiz, a low-cost mini-course, the book ***Love Deliberately***, a self-paced online course, and an in-person retreat. The method is differentiated by one framework applied across romantic, family, friendship, and workplace relationships, with professional Kinesiology used to reach the unconscious patterns that conversation alone does not.

The founder identifies visibility as her priority. After our test, attention is already being generated from speaking engagements, international podcasts, the Brisbane Business Hub, and a co-authored book opening ten author databases. But the free quiz named in the brief is not present on the site at all. According to the brief meeting, clients arrive mainly through referrals and convert into one-to-one bookings rather than digital product sales.

There are two contradictions in the brief that need resolving. The brief centers on social media, but the founder treats social media as a medium that she does not want to invest time in. As a result, we treat the task as building a conversion path instead of a social media strategy. The advertising spending is limited until the popularity improves. We treat paid spend as a later step, not a starting point.

There are three factors constraining the solution boundary. The founder is a single operator working alongside full-time employment. The advertising spending is limited until the popularity improves. There is no established following to draw on, and this is the first product brought to market under her own name.

We recommended building a reusable content system that can route potential clients into the free quiz before investing further in reach. In section 5, we evaluate this against two alternatives and set out a four-week test.

The core audience is Australian women aged 40 and over. The founder will also extend it to premarital couples.

2. Market and Industry Analysis

Industry Overview

The Australian market is seeing a rapid rise in demand for non-clinical coaching and preventive support services. The rise is driven by mental health pressures facing the population and capacity constraints within the clinical care system (Australian Psychological Society, 2022; Productivity Commission, 2020). 42.9% of Australians aged 16-85 have experienced a mental disorder at some point in their lives (ABS, 2023). Also, according to AIHW (2025), 2.8 million Australians accessed mental health services through the Medicare program during the 2024–2025 period. Therefore, the high costs and long waiting times associated with traditional psychological services have led Australian consumers to turn toward non-

clinical coaching and preventive mental health support services (NMHC, 2025). During Alfina's meeting, the key information gathered during consultations with Alfina reveals that her current client base relies almost entirely on word-of-mouth referrals. While this reflects a high level of client trust and service effectiveness, it also highlights the scalability limitations inherent in a business model based purely on one-on-one consulting and referral-driven growth. However, this model has not yet demonstrated robust or sustainable growth, mainly due to a heavy emphasis on customer referrals. Consequently, the shift in the operating model enables the enterprise to sustainably expand its market reach.

Macroeconomic Analysis (Appendix 1)

Political	Small business support initiatives could help fund digital infrastructure in Brisbane (ASBFEO, 2025)
Economic	Rising cost-of-living pressures favor a sales funnel model, progressing from free quizzes and low-cost courses to premium, in-depth experiential programs while organic growth helps sustain cash flow (RBA, 2026).
Social	Australian women over 40 facing relationship stagnation require subconscious-level support through Kinesiology (ABS, 2025).
Technological	Content repurposing enables the deployment of self-paced courses without incurring video production costs
Environmental	Providing services online can reduce emissions per client by up to 50% (ACI, 2025).
Legal	Email collection must comply with data privacy laws.

3. Competitor Analysis

The client brief identifies three Australian competitors: Debbie Rivers, Samantha Jayne and Jacqueline Hellyer, and four global competitors with significant Australian audiences: The Gottman Institute, Alison Armstrong, Jay Shetty and Quinlan Walther. The following comparison focuses on three relevant competitors and one non-direct benchmark serving women aged 40 and over.

Brand	Positioning and Content	Customer Journey	Implications for Alfina
Samantha Jayne	Dating expertise supported by psychology and human behaviour; offers coaching and dating-profile services (Samantha Jayne, n.d.).	Clear service options and a free strategy call.	Communicate a clear value proposition and give users a specific next step.
LoveLife Clinic	Practitioner-led relationship services, online courses, podcasts and retreats (LoveLife Clinic, n.d.-a, n.d.-b, n.d.-c).	Offers both self-paced digital products and higher-touch services.	Connect Alfina's books, online courses and coaching within a clear product pathway.
The Gottman Institute	Educational content addressing specific relationship challenges, including digital boundaries (The Gottman Institute, 2020).	Practical educational resources help users engage with relationship topics.	Create useful content that directs users towards relevant resources rather than relying on engagement alone.
Forty & Forward	Non-direct Australian wellness brand supporting women over 40 through practical education and community (Forty & Forward, n.d.).	A free six-day reset and community provide entry points to a more structured paid programme.	Test a low-barrier free resource that builds trust before introducing paid offerings.

The comparison highlights three transferable practices: clear calls to action, multiple product formats and educational content that builds trust. Forty & Forward is particularly relevant because it combines a free introductory experience, community engagement and a paid programme for the target age group. However, these examples demonstrate observable marketing approaches rather than proving their conversion effectiveness.

For Alfina, the opportunity is to connect these practices through a more structured customer journey. Social media content could direct users to the free relationship quiz. After completing it, users could provide their email address to access a detailed result, with a brief result summary available beforehand. The results page could then recommend a relevant book or course, while optional follow-up emails provide further guidance and product information. This approach should be tested rather than assumed to be effective.

From a logistics and supply chain perspective, this proposed funnel can be evaluated as an end-to-end process rather than a series of isolated marketing activities. Alfina could monitor the conversion rate between each stage to identify where potential customers drop out and prioritise the most significant bottlenecks. For example, a high quiz completion rate but low email sign-up rate may indicate that users see limited value in unlocking the full results. Similarly, strong product-page traffic but few purchases may suggest a need to review product positioning or the purchasing process. This data-driven approach would help Alfina allocate her limited time and resources more effectively before investing in additional content production or paid advertising.

4. Customer Analysis

Alfina has one established customer segment and one untested potential segment. The primary audience is women aged 40 and over who are capable and successful but experience recurring patterns across romantic, family, friendship and workplace relationships. The proposed premarital audience needs

communication and conflict-management skills before marriage. As demand remains untested, these groups require separate marketing strategies.

Michelle is an illustrative persona, not an interviewed client. She is assumed to be a 49-year-old professional who feels confident at work but avoids personal conflict, agrees to unwanted requests and later feels unheard. These assumptions create a realistic marketing scenario rather than represent established customer facts.

Michelle may seek help when repeated interactions prompt the question, “Why does this keep happening?” Awareness content should therefore use recognisable situations across different relationships. Facebook and Instagram are channels to test: Facebook reached 78% of Australian adults, while weekly Instagram use reached 44% among people aged 45–54 and 33% among those aged 55–64 (ACMA, 2026).

Once Michelle visits Alfina’s profile or website, content should build trust through explanations of the seven-ingredient framework, Professional Kinesiology and product options. A gradual journey from the free quiz to the mini course, book and higher-commitment offers reflects people’s tendency to manage relationship pressures independently before seeking professional help (Relationships Australia, 2024).

Customer Journey & Offer Testing

Michelle | Needs, content experiments and success metrics

Customer stage	Michelle’s likely need	Content or offer to test	Key metric
01 Awareness	“Why does this keep happening?”	Scenario-based content on boundaries, conflict, people-pleasing and feeling unheard	Link click-through rate
02 Exploration	“Does this apply to me?”	Examples across partner, family, friendship and workplace relationships	Quiz-start rate
03 Self-assessment	“What pattern am I repeating?”	Free relationship quiz	Quiz completion rate
04 Trust building	“Is this approach relevant and credible?”	Framework explainers, FAQs and beta feedback	Email opt-in / click-through rate
05 First purchase	“Can I try this without a major commitment?”	Mini course or book	Lead-to-purchase conversion
06 Deeper engagement	“Am I ready for more support?”	Full course, coaching or retreat	Upgrade rate

Performance should be assessed through funnel behaviour rather than follower numbers or likes alone. High engagement with few quiz starts may indicate attention without action, whereas lower engagement with stronger click-through or quiz-start rates may be more valuable. Low quiz completion may signal friction; strong completion with weak email opt-in may suggest unclear subscription value.

Content themes should be tested as hypotheses. Comparing boundaries, people-pleasing, family conflict, workplace relationships, communication and feeling unseen through quiz starts, completions and purchases can distinguish relatable content from content attracting interested customers.

Aggregated quiz responses can reveal common concerns and differences in customer journeys, supporting behaviour-based segmentation beyond demographic assumptions. Beta testing can add evidence through course completion, module drop-off, perceived usefulness and recommendation intent. For a single-operator business, testing one topic across several formats and channels helps concentrate investment on content producing stronger conversion.

The premarital audience requires separate market validation. Relationship education may improve short-term communication, but evidence on longer-term relationship quality is mixed (Commerford & Hunter, 2016). A landing page, survey, waitlist or small pilot could test demand before developing another course. Given Alfina's limited capacity, the established 40+ audience should remain the priority.

Health and wellness businesses are better positioned as referral or cross-promotion partners than end customers. Customer and funnel data can progressively replace assumptions with observed behaviour and support evidence-based marketing decisions.

5. Business Opportunities & Ideation

Three business opportunities could help Alfina Lofaro Kinesiology and Coaching attract customers while remaining realistic for a sole operator with limited time and budget. These include strengthening word-of-mouth referrals, developing reusable content and establishing complementary partnerships.

5.1 Convert Word-of-Mouth into Digital Product Referrals

Alfina currently attracts customers through referrals, although these mainly lead to one-to-one bookings rather than digital product sales. This creates an opportunity to extend an existing acquisition channel towards her online products.

Existing clients could voluntarily share the free relationship quiz with friends, family or colleagues through referral links or QR codes. Electronic word-of-mouth (eWOM) research suggests that recommendations can influence consumer trust and purchase intentions (See-To & Ho, 2014). Rather than immediately promoting paid courses, the quiz provides a low-commitment introduction to Alfina's approach. Authentic client testimonials, shared with permission, could further strengthen trust.

5.2 Develop a Reusable Content System

A second opportunity is to reduce the time required to maintain Alfina's digital presence. Instead of producing different content for every platform, one relationship topic could be adapted into an Instagram carousel, Facebook post, short video and email.

This would support consistent communication while reducing content creation demands. Australian Government guidance recommends selecting social media platforms according to available time and resources rather than managing too many channels ineffectively (Australian Government, n.d.).

For example, content about recurring relationship patterns could encourage audiences to complete the free quiz, followed by emails introducing Alfina's digital products. This creates a clearer pathway from social media engagement to potential course purchases.

5.3 Develop Complementary Partnership Channels

A third opportunity involves collaborating with complementary health and wellness businesses to reach customers beyond Alfina's existing audience. The Resource-Based View (RBV) suggests that strategic alliances create value by combining complementary organisational resources (Das & Teng, 2000).

Potential partners could provide access to established customer communities, while Alfina contributes relationship education and Professional Kinesiology expertise. Collaborations could include newsletter features, educational workshops, guest appearances and referral links. This could help reach more women aged 40+ without requiring a large social media following.

5.4 Recommendation and Prioritisation

After comparing the three opportunities based on cost, time requirements, customer reach and feasibility, the reusable content and conversion system is recommended as the initial priority (Appendix 5.1). Unlike referrals and partnerships, this approach provides a more direct pathway from social media engagement to the free quiz and digital products, while remaining manageable for Alfina's limited resources.

Word-of-mouth referrals could support this strategy, while partnerships offer longer-term growth opportunities. A proposed four-week implementation plan explains how Alfina could test the system (Appendix 5.2), while Appendix 5.3 provides examples of adapting relationship topics across different platforms.

Overall, this low-cost approach offers a practical starting point for increasing digital product sales. Its effectiveness should be assessed through quiz completions, email sign-ups and course purchases before expanding further.

Appendix 5.1. Business Opportunity Evaluation Matrix

Evaluation criteria	Word-of-mouth referrals	Reusable content system	Partnerships
Estimated cost	Very low	Low	Low
Time required	Low	Moderate initially	Moderate – high
Connection to digital product sales	Indirect	Direct	Indirect
Ease of implementation	High	High	Medium
Potential customer reach	Moderate	High	High
Overall priority	**2nd**	**1st**	**3rd**

Note. Preliminary qualitative evaluation based on Alfina's stated constraints. The rankings are proposed judgements, not measured outcomes.

Appendix 5.2. Proposed Four-Week Implementation Plan

Week	Focus	Key activities	Expected output
Week 1 Preparation	**Content planning and setup**	• Select four relationship topics (e.g., recurring patterns, communication, boundaries) • Prepare reusable content templates for Facebook, Instagram and email • Check that the free quiz and email follow-up process works correctly	• Content ready for four weeks • Working quiz and email pathway
Week 2 Launch	**Content launch**	• Publish Facebook and Instagram content with clear quiz links • Encourage existing customers to share the quiz voluntarily	• Initial audience engagement • Quiz visits and shares
Week 3 Test	**Engagement and testing**	• Continue publishing content • Monitor quiz completions and email sign-ups • Adjust content based on early responses	• Early conversion data • Insights on effective content
Week 4 Evaluate	**Evaluation**	• Review quiz completions, email engagement and course purchases • Identify which content performed best • Determine next steps for content, referrals and partnerships	• Evidence to refine or continue the strategy • Key learnings for future growth

Appendix 5.3. Examples of Content Adaptation for a Weekly Theme

Weekly theme (example)	Instagram (carousel post)	Facebook (image + caption)	Email (short version)	Call to action
"Why do we keep repeating the same relationship patterns?"	• 4–5 slides explaining common patterns • Simple visuals and key takeaways • Final slide with quiz link	• One key message and image • Short caption sharing Alfina's insights • Link to the free quiz	• Brief explanation of the topic • Personal insight from Alfina • Invitation to complete the quiz • Preview of related mini-course	• "Take the free relationship quiz" • Link to quiz landing page • Optional: follow-up email to promote mini-course

5.5 When paid amplification becomes variable

We modelled advertising break-even based on the published price and figured out that the budget size does not determine viability. Because spend has been canceled out if the condition. As a result, where the quiz sends people is more important than how much the founder should spend on advertising. At a 2% purchase rate, each quiz completion is worth between $1.53 and $5.80, depending on the course level. Advertising is only worth testing after the quiz completions are being tracked. More calculations can be found in Appendix 5.4 and 5.5.

6. Key Findings, Gap Analysis & Project Management

6.1. Key Findings

The priority is to test a reusable content and conversion system for Australian women aged 40+. The above sections reveal that attention is already present with referrals, speaking, and podcasts, but no path leads it to digital sales: the free quiz is not present on the site; referrals translate into one-to-one reservations. This target group can be accessed on both Facebook and Instagram (ACMA, 2026), and this system can be used by one operator who has a modest budget. Their trade-off is lower outreach compared to partnerships or advertising, and postponing the premarital course.

6.2. Gap Analysis

It is determined that there are only three points. Clients come primarily on referral, the quiz is not live, and the audience uses Facebook and Instagram. Conversion rates, content themes and persona are mere assumptions. Best-performing topics and the advertising viability (Appendix 5.4) cannot be checked without conversion data. Social proof of courses is still in beta, the value of partnerships is not proven, and the demand for marriages is not tested. Each gap therefore delays expansion rather than investment in the core.

6.3. Project Management Roadmap

The first step in filling the conversion gap is the four-week plan. Alfina has content and weekly reviews, and her contractor develops quiz tracking and the email pathway. The most important metrics include quiz starts, completions, email opt-ins, purchases and founder hours. A weak stage is refined, and then channels are added. Advertising would be tested only when cost per completion is less than the product of conversion rate and margin; partnerships and a premarital waitlist would come later, once the 40+ funnel converts (Appendix 6).

Appendix 1: PESTLE

Political: The Australian government's support policies for small businesses create a favourable regulatory environment (ASBFEO, 2025). Therefore, Alfina be able to leverage these initiatives to subsidize digital infrastructure development and platform integration in Brisbane.

Economic: Due to amid rising cost-of-living pressures (RBA, 2026), a product funnel structure which from free quizzes and low-entry-cost courses to premium retreats. These model help eliminate initial financial barriers for customers. Prioritizing organic growth over heavy advertising expenditure also helps optimize cash flow.

- Using a financial perspective helps Alfina prioritize organic content, this will initialize customer acquisition costs. Specifically, by tracking the customer lifetime value metric throughout the sales funnel, future paid advertising activities can be strategically deployed to reach a clear break-even point, the moment when revenue from initial digital products offsets total advertising costs: Break-even sales volume = Total advertising costs / Average net profit margin per digital product.

Social: Australian women over the age of 40 facing relationship impasses constitute a demographic that endures significant yet often overlooked pressures, requiring subconscious-level interventions through Kinesiology (ABS, 2025).

Technology: The strategy lies in repurposing content across multiple platforms to offer self-paced courses without the need for expensive video production equipment.

Legal: The process of collecting customer emails via free resources requires businesses to strictly adhere to personal data protection principles under Australian privacy laws (OAIC, 2026). Furthermore, Kinesiology is not covered by Medicare, nor is it eligible for reimbursement through private health insurance. Consequently, marketing materials must clearly position Kinesiology as a non-clinical, complementary practice for stress management and personal empowerment, while avoiding medical or clinical claims to ensure compliance with ACCC standards.

Environmental: Shifting towards digital products based on a one-to-many model will foster a more sustainable business model. According to ACI (2025), transitioning psychological care services from in-person to online formats reduces carbon emissions per client by up to 50% by eliminating the need for physical travel, thereby aligning with the brand's digital transformation strategy.

Appendix 2

Brand	Positioning and Content	Customer Journey	Implications for Alfina
Samantha Jayne	Dating expertise supported by psychology and human behaviour; offers coaching and dating-profile services (Samantha Jayne, n.d.).	Clear service options and a free strategy call.	Communicate a clear value proposition and give users a specific next step.
LoveLife Clinic	Practitioner-led relationship services, online courses, podcasts and retreats (LoveLife Clinic, n.d.-a, n.d.-b, n.d.-c).	Offers both self-paced digital products and higher-touch services.	Connect Alfina's books, online courses and coaching within a clear product pathway.
The Gottman Institute	Educational content addressing specific relationship challenges, including digital boundaries (The Gottman Institute, 2020).	Practical educational resources help users engage with relationship topics.	Create useful content that directs users towards relevant resources rather than relying on engagement alone.
Forty & Forward	Non-direct Australian wellness brand supporting women over 40 through practical education and community (Forty & Forward, n.d.).	A free six-day reset and community provide entry points to a more structured paid programme.	Test a low-barrier free resource that builds trust before introducing paid offerings.

Appendix 3

Appendix 4

Customer Journey & Offer Testing

Michelle | Needs, content experiments and success metrics

Customer stage	Michelle's likely need	Content or offer to test	Key metric
01 **Awareness**	"Why does this keep happening?"	Scenario-based content on boundaries, conflict, people-pleasing and feeling unheard	**Link click-through rate**
02 **Exploration**	"Does this apply to me?"	Examples across partner, family, friendship and workplace relationships	**Quiz-start rate**
03 **Self-assessment**	"What pattern am I repeating?"	Free relationship quiz	**Quiz completion rate**
04 **Trust building**	"Is this approach relevant and credible?"	Framework explainers, FAQs and beta feedback	**Email opt-in / click-through rate**
05 **First purchase**	"Can I try this without a major commitment?"	Mini course or book	**Lead-to-purchase conversion**
06 **Deeper engagement**	"Am I ready for more support?"	Full course, coaching or retreat	**Upgrade rate**

Appendix 5： Advertising break-even model

Appendix 5.1,5.2 and 5.3

Appendix 5.1. Business Opportunity Evaluation Matrix

Evaluation criteria	Word-of-mouth referrals	Reusable content system	Partnerships
Estimated cost	Very low	Low	Low
Time required	Low	Moderate initially	Moderate – high
Connection to digital product sales	Indirect	Direct	Indirect
Ease of implementation	High	High	Medium
Potential customer reach	Moderate	High	High
Overall priority	**2nd**	**1st**	**3rd**

Note. Preliminary qualitative evaluation based on Alfina's stated constraints. The rankings are proposed judgements, not measured outcomes.

Appendix 5.2. Proposed Four-Week Implementation Plan

Week	Focus	Key activities	Expected output
Week 1 Preparation	**Content planning and setup**	• Select four relationship topics (e.g., recurring patterns, communication, boundaries) • Prepare reusable content templates for Facebook, Instagram and email • Check that the free quiz and email follow-up process works correctly	• Content ready for four weeks • Working quiz and email pathway
Week 2 Launch	**Content launch**	• Publish Facebook and Instagram content with clear quiz links • Encourage existing customers to share the quiz voluntarily	• Initial audience engagement • Quiz visits and shares
Week 3 Test	**Engagement and testing**	• Continue publishing content • Monitor quiz completions and email sign-ups • Adjust content based on early responses	• Early conversion data • Insights on effective content
Week 4 Evaluate	**Evaluation**	• Review quiz completions, email engagement and course purchases • Identify which content performed best • Determine next steps for content, referrals and partnerships	• Evidence to refine or continue the strategy • Key learnings for future growth

Appendix 5.3. Examples of Content Adaptation for a Weekly Theme

Weekly theme (example)	Instagram (carousel post)	Facebook (image + caption)	Email (short version)	Call to action
"Why do we keep repeating the same relationship patterns?"	• 4–5 slides explaining common patterns • Simple visuals and key takeaways • Final slide with quiz link	• One key message and image • Short caption sharing Alfina's insights • Link to the free quiz	• Brief explanation of the topic • Personal insight from Alfina • Invitation to complete the quiz • Preview of related mini-course	• "Take the free relationship quiz" • Link to quiz landing page • Optional: follow-up email to promote mini-course

Appendix 5.4: del works

Let ***S*** be advertising spend, ***c*** be the cost of buying one quiz completion, ***p*** be the share of completions that go on to purchase, and ***m*** be the contribution margin of that purchase.

$$\frac{S}{c} \cdot p \cdot m \geq S \Rightarrow p \geq \frac{c}{m} \Rightarrow c_{max} = p \cdot m$$

The spend cancels out. The only thing that can decide whether advertising works is the relationship between cost and margin.

Appendix 5.5: Contribution margin

Contribution margin is price minus the payment processing cost. It excludes the fixed cost of producing the course because it has already been incurred and does not need to be calculated again when it makes the sale.

Product	Price	Fee	Margin
Mini course	$79.00	$2.37	$76.63
Online course - low	$149.00	$4.47	$144.53
Online course - high	$299.00	$8.97	$290.03

Maximum affordable cost per quiz completion

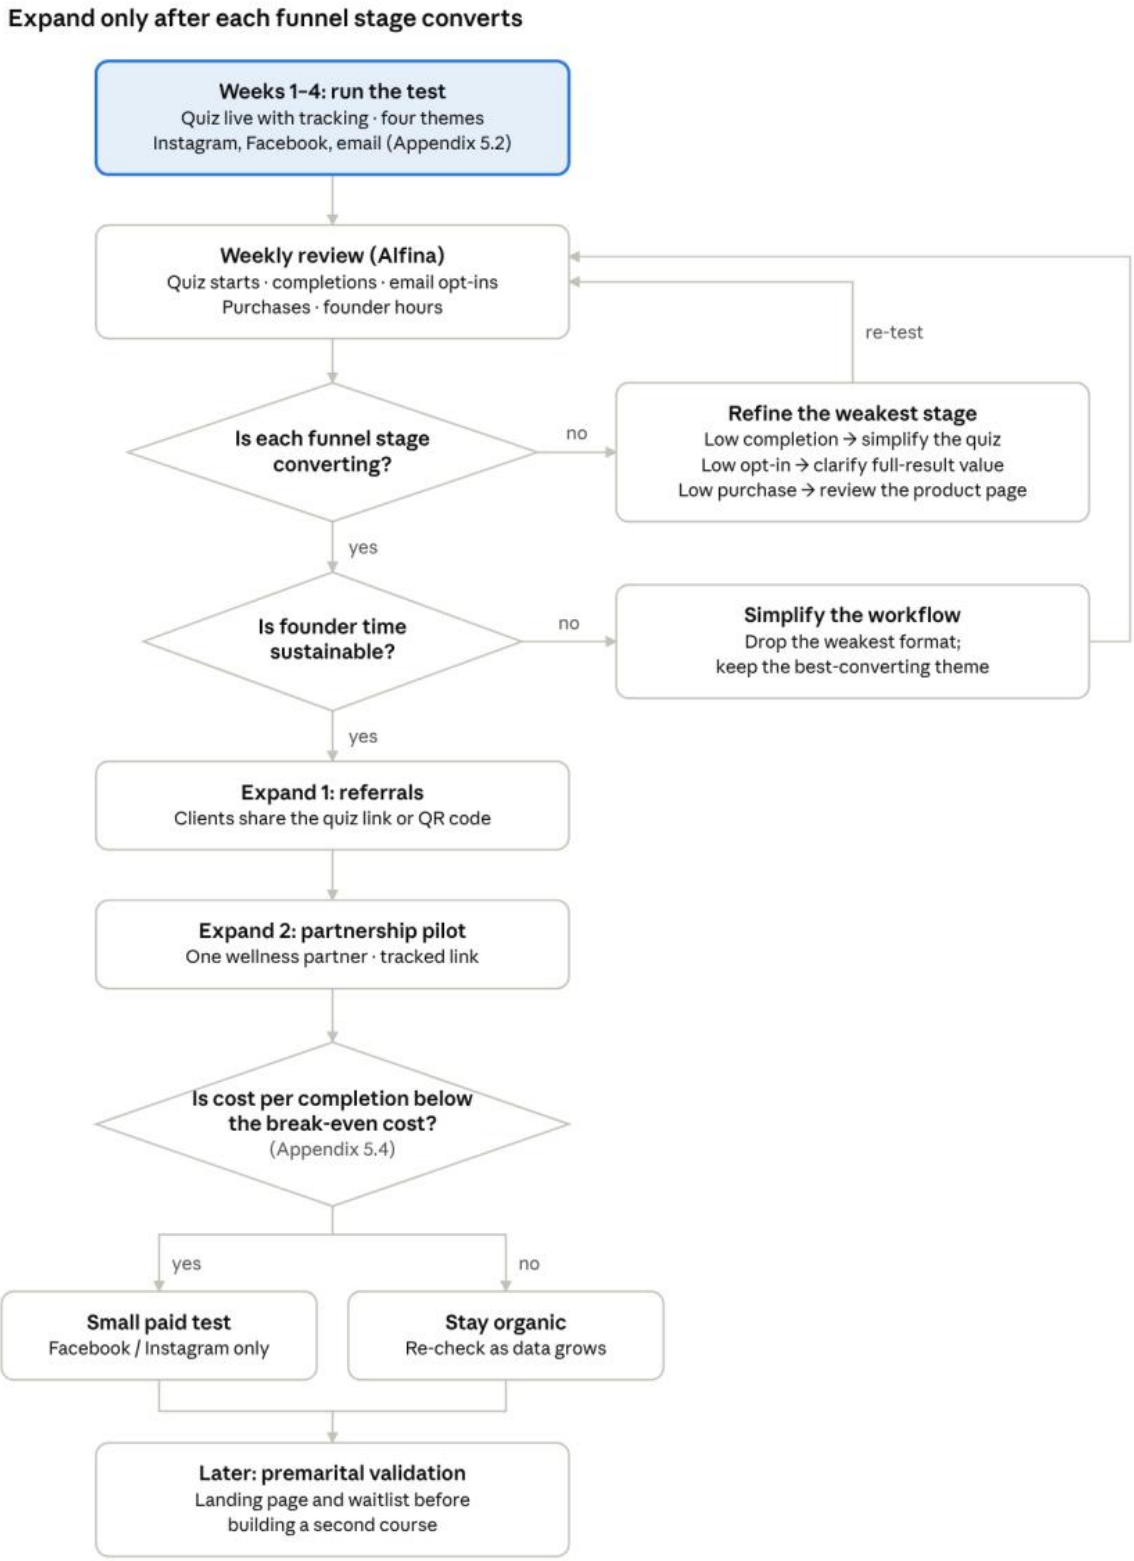

The most that can be paid to acquire one quiz completion and still break even. This can be calculated by conversion rate times contribution margin.

Quiz-to-purchase conversion	Mini course	Online course - low	Online course - high
1.0%	$0.77	$1.45	$2.90
2.0%	$1.53	$2.89	$5.80
5.0%	$3.83	$7.23	$14.50
10.0%	$7.66	$14.45	$29.00

Assumptions and limitations

1. We estimate the payment processing cost at 3% of the price. The actual processor and course platform are not confirmed. A platform charging per-transaction fees may reduce margin and lower every figure.
2. Conversion rates are a scenario range, not an estimate for this business.
3. The model only counts the first purchase. A later purchase by the same customer may raise the affordable cost.
4. The spill-over effect has been excluded from this model.
5. The actual conversion rate cannot be measured until the quiz completions are being tracked.

Appendix 6

Expand only after each funnel stage converts
Weeks 1–4: run the test
Quiz live with tracking · four themes
